

Aggregation Kata

The goal of this kata is to practice small nuances of aggregation.
We will use CTEs to provide the proper data for each case.
That allows creating small cases for quick testing and feedback.

For example

```
with
Animals as (select "Dog" as animal_type
union select "Cat"
union select "Lion")
Select *
from
Animals
;
```

1.

Complete the following query so you will get 4 raw rows and 2 aggregated rows. Group by year and count the rows.

With Sales as (select "Computer A" as product, "Electronics" as category, 2026 as year, 100 as volume, 50 as price
Complete here

```
)
Select *
from
# Complete here
;
```

2.

This time choose only sales after 2020.
There are two ways to do so. What is the difference? Which way is preferred?

With Sales as (select "Computer A" as product, "Electronics" as category, 2026 as year, 100 as volume, 50 as price

Complete here

```
)  
Select *  
from  
# Complete here  
;
```

3.

This time chose only sales of "Electronics".

Are there two ways to do so? What is the difference from the previous question?

With Sales as (select "Computer A" as product, "Electronics" as category, 2026 as year, 100 as volume, 50 as price

Complete here

```
)  
Select *  
from  
# Complete here  
;
```

4.

This time chose only years of more than two sales

Are there two ways to do so? What is the difference from the previous question?

With Sales as (select "Computer A" as product, "Electronics" as category, 2026 as year, 100 as volume, 50 as price

Complete here

```
)  
Select *  
from  
# Complete here  
;
```

5.

This time group by year and category. Will you get more or less records compared to grouping by only year?

With Sales as (select "Computer A" as product, "Electronics" as category, 2026 as year, 100 as volume, 50 as price

Complete here

)

Select *

from

Complete here

;

6.

This time group by year and category and choose only aggregated row based on at least 2 raw rows. Will you get more or less records compared to grouping by only year?

With Sales as (select "Computer A" as product, "Electronics" as category, 2026 as year, 100 as volume, 50 as price

Complete here

)

Select *

from

Complete here

;

7.

This time group by year and count the sales. Group the result by sales and find the number of years each sale number appeared.

With Sales as (select "Computer A" as product, "Electronics" as category, 2026 as year, 100 as volume, 50 as price

Complete here

)

Select *

from

Complete here
